Bachelor of Occupational Therapy (B.O.T.)

Bachelor of Occupational Therapy (B.O.T.) is an undergraduate course program for the candidates who will be a part of rehabilitation team and work as a health care professional for the betterment of an individual's physical and mental well-being.

Occupational Therapy is the art and science of directing man's participation in selected tasks to restore, reinforce and enhance performance. It facilitates learning of those skills and functions essential for adaptation and productivity and to promote and maintain health.

Occupational Therapy uses particular activities as an aid for betterment from physical or mental illness. An occupational therapist is defined as a person who "assists people across the lifespan in engaging in the activities they want and need to do through the therapeutic use of everyday activities (occupations).

This program is formulated to enable the student to gain adequate knowledge, skills and clinical hands-on experience leading to establish them as an independent professional in clinical practice.

Master of Occupational Therapy (M.O.T)

Master of Occupational Therapy (M.O.T) is a post-graduate course program.

The Masters of Occupational Therapy program is meant to help students acquire the knowledge, abilities, attitudes, and character needed to become competent and effective occupational therapists. The curriculum is designed to get a postgraduate student ready for professional independence and self-regulation on par with international norms. It enables participants to approach decision-making and problem-solving in healthcare-related matters with assurance and evidence-based comprehension.

The curriculum places a strong emphasis on fostering the growth of research-related abilities in the applicant in order to enhance their knowledge of the methodology of research and expand their perspective on the profession of occupational therapy.

Specialisation:

- Paediatrics
- Neurosciences
- Orthopaedics

Career in Occupational Therapy:

- The practice of occupational therapy means the therapeutic use of everyday life occupations with persons, groups, or populations (clients) to support occupational performance and participation.
- Occupational therapy practice includes clinical reasoning and professional judgment to evaluate, analyse, and diagnose occupational challenges (e.g., issues with client factors, performance patterns, and performance skills) and provide occupation-based interventions to address them.
- Occupational therapy services include rehabilitation, and the promotion of physical and mental health and wellness for clients with all levels of ability related needs.
- These services are provided for clients who have or are at risk for developing an illness, injury, disease, disorder, condition, impairment, disability, activity limitation, or participation restriction.
- Through the provision of skilled services and engagement in everyday activities, occupational therapy promotes physical and mental health and well-being by supporting occupational performance in people with, or at risk of experiencing, a range of developmental, physical, and mental health disorders.
